Samsung Multimedia Telephone (SMT) Series Handsets

SMT-i5243 Handset Features

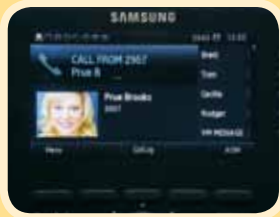

Video Calls

Video calling is now an effortless reality. Simply call from a camera equipped SMT-i5243 phone to a similarly equipped user within your enterprise network and a video call is automatically activated. Video calls can also be made via the **OfficeServ Communicator** application for PC's using optional USB cameras. Video and audio conversations can be recorded for later review.

Advanced UC Features

The large display SMT-i5243 handset can provide advanced UC collaboration features such as presence information for key staff members, either via the intuitive display on the handset or seamlessly integrated with the **OfficeServ Communicator UC** application on your PC.

Phone Book

Users can create or import a personal visual phone book with photos which can be searched and dialled by simply pushing a button. Incoming calls will be matched with phone book contacts if they exist and details displayed on the screen.

Call Log

The call logs feature presents a summary of all incoming, outgoing and missed calls and are accessible to the user. Call logs can be used to return calls and numbers can be added to the users phone directory.

Large colour display (480x272 pixels)

Telephone Status Indicator (TSI) for voice mail, on call or DND

Integrated headset jack - easily switch between headset and handset modes

Two 10/100 switch ports for integration of LAN and PC (optional Gigabit switch)

10 menu soft keys

Navigation UC Dial
Allows users to easily navigate through menu options, (very similar to a mobile phone interface) and simply change their call forward options

Function Key Icons illuminate while active

USB port for connecting memory stick web camera for video calling to other Samsung video phones, and bluetooth capability

Programmable soft keys can be customised for each user

Samsung OfficeServ SMT range of IP Handsets

In today's competitive environment small and mid-sized businesses need every possible edge. Samsung's **OfficeServ™** SMT-i Series VoIP handsets can make your business more efficient, collaborative and agile.

Compatible with all Samsung **OfficeServ** 7000 Series telephony systems, the versatile SMTs (Samsung Multimedia Telephones) can be easily set up in the main office as well as in remote work locations — enhancing productivity and communication among employees and off-site colleagues while helping to reduce costs. And when your business is ready to grow, simply add more phones to the existing LAN and connect to the world of opportunity.

Rich with high-tech features such as short messaging, video calling, and phone book capabilities, Samsung's IP phones provide the tools you need to stay connected to employees, colleagues and customers. Large display screens put important caller information front and centre, and easy-to-navigate menus ensure that even the newest user can take advantage of all features and functionality.

With Samsung's SMT-i5200 Unified Communications (UC) range of phones, convenience is paramount. Equipped with high-definition audio technology for crisp, clear sound and full duplex speakerphones for group meetings and hands-free usage, these phones are the ultimate in VoIP communication technology.

The SMT-i5200 range of UC handsets also utilise the open architecture of XML (Extensible Markup Language) allowing access to the rich world of customised software applications by integrating the handset displays and soft keys. Your investment in Samsung IP technology is ready for the future as well as today.

With striking design, intelligent ergonomics and an exciting new feature set, the SMT series range carries the industry recognition of the prestigious iF Communications Design Award and the Good Design Award.

SMT-i5243

This fully-featured executive handset is ideal for users who handle large volumes of calls. Well suited for executives, management, admin staff, contact centre supervisors.
